

Child Development & Rehabilitation

Evidence Centre

Accelerating the benefits of research for children and youth with special needs in British Columbia

EIHC Competency Development

Our online resource toolkit, e-learning, 1:1 mentoring and interactive group workshops help clinicians, knowledge brokers and leaders gain the knowledge and skills required to formulate answerable clinical and health services questions, search for and appraise evidence, and apply it to practice. Integrated theory, frameworks and templates guide each step of the process for both novice and advanced learners. Access our [EBP Resource Toolkit](#) to get started!

Student EIP Initiative

This initiative aims to support fieldwork students across professional disciplines at Sunny Hill in targeting their **evidence informed practice (EIP)** and **interprofessional learning needs** in an applied clinical context. Students generate valuable knowledge products and clinical resources or tools, and gain opportunities to facilitate the clinical integration of the evidence they explored during their placement. Learn more on our [Student EIP Initiative](#) page!

Clinical Librarian Service (CLS)

The CLS serves all Evidence Centre initiatives by **facilitating evidence integration at the point of care** through supported clinical and health services question development, search strategy assistance, record and full text retrieval and evidence surveillance. Competency development in EIHC is provided through 1:1 mentoring, resource development and group education. Connect through our [online CLS portal](#) for Sunny Hill staff.

Services

Knowledge Brokering (KB) Initiative

Knowledge brokers (KB) are capacity builders, information managers and linking agents that facilitate EIHC. This initiative advances the practice of knowledge brokering through partnerships to support role,

Rapid Response Evidence Service (RRES)

Facilitating evidence informed decision-making for clinical practice or health services delivery, **the RRES assists leaders** in quickly accessing and implementing evidence in

Research Linkage & Exchange (L&E)

The purposes of our Linkage & Exchange network are to accelerate knowledge creation & translation, as well as practice informed research in child development and rehabilitation across BC. We connect researchers

process and competency development. Learn how KBs conduct needs assessments, guide EIP processes, adapt resources, generate and share knowledge products and evaluate their activities. Access our [Knowledge Broker Resource Page](#) for more information & tools, including an e-learning orientation to the role!

response to the strategic objectives of the organization, program or team. A spectrum of knowledge products, from reference lists to evidence syntheses and clinical or decision-support tools are generated as a means of supporting implementation. View our [RRES flow diagram](#) for more details about the process.

with clinicians, clients and families through various forums, support the exploration of clinically relevant research questions, engage clinicians in research, and broker knowledge to stakeholders across the province and beyond. Think we should be partnering on this? Connect with us! Twitter: [@SunnyHill_Evid](#)
